National Geospatial-Intelligence Agency Jobs — Geospatial Data Analyst — St. Louis, MO, USA

Description

Geospatial Data Analyst work in **St. Louis, MO, USA** involves the kind of research documentation and dependable technical records often found in geospatial intelligence. The work calls for reviewing map-based datasets as well as assisting with geospatial quality checks, often within a clear department workflow. Comfort with GIS and mapping helps with deadlines, coordination, and data quality.

Responsibilities

- Review map-based datasets.
- Assist with geospatial quality checks.
- Organize project data, observation logs, or laboratory documentation in a consistent format.
- Flag missing entries and share updates with technical or research staff.

Qualifications

- Comfort reading technical instructions and checking information for consistency.
- Organized note-taking and confidence with spreadsheets or scientific records.
- Practical familiarity with GIS and mapping.

Experience

Work, study, or volunteer projects involving GIS can help build relevant experience.

Skills

GIS, mapping, data analysis, Geospatial Data Analyst, Technical records, structured data, quality checks
